Claim Objections

1. Claims 10 and 20 are objected to because of the following informalities:

The phrase "in fact" used twice in each of these claims is objected to as indefinite and unnecessary. The phrase should simply be deleted from the claims.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-11 and 13 –21 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Sugayauchi et al (cited by Applicant).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 12 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sugayauchi et al.

Sugayauchi et al discloses a second guiding portion 36 on the clip in the embodiment of figure 8 which is in the form of a cut or recess, and engages the first guiding portion 16 of the weight. Only one cut (or serration) is shown on each side of the securing portion of the clip.

Those of ordinary skill in the art would have found it obvious to provide a plurality of cuts or serrations 36 in the side of the clip of Sugayauchi et al as this is merely a multiplication of parts, and the result of providing better gripping of the weight by the clip is predictable.
